

Life after COVID -19

Assist.Prof. Dr.Kareem F. Aziz Al-Barzinjy
in Hawler Medical University /Part time in health
administration in Cihan University.

There is no doubt that the pandemic of COVID-19 caused the closure of the whole world in terms of social, economic, educational, tourism, industrial, and others. **Scientist Walt**, a professor of international relations at Harvard University, sees that the Corona pandemic will contribute to strengthening the countries , and that governments around the world will adopt emergency measures to manage the next crisis of an epidemic.

According to **Walt**, the current epidemic will not contribute to changing the global policy that is common by conflict, and there is a fact that the epidemics that happened before did not put an end to conflict between the superpowers and others and were not a starting point for a new global cooperation.

According to **Nebelet**, president of British-based Royal Institute of International Affairs, the Covid-19 outbreak also forced governments, companies and societies to enhance their ability to deal with long periods of self-economic isolation.

In beginning weeks in year 2020 , the rapid spread of the Corona virus has affected all parts of the world , closing life in many cities, closing markets, slowing travel and damaging the world economy, as well as highlighting failure of some governments to fight COVID-19 .

Kishore , a researcher at the Asia Research Institute at the National University of Singapore said that the openness of China to the world during the past few decades has resulted in an economic recovery and enhanced the confidence of the Chinese people in their culture. The Chinese have come to believe in their ability to compete any where in the world and even compete American economy.

USA did not pass as a leader:

Shack director-General of the International Institute for Strategic Studies, said that the world will no longer view the United States as an international leader due to the behavior of the USA administration that is based on the narrow self-interests and the lack of competency of that administration during outbreak of COVID1-19.

Who writes history for success against Corona?

John Allen, director of the Brookings Institution, expected that the success in the war against the COVID-19 would be able to write history as it is common in human history.

He said that all countries are suffering from the societal stress resulting from the spread of the virus in new and powerful ways, and the countries that have good political, economic and active health systems, will success over countries that have different negative results in their war against the COCID-19.

Professor Mark Wool, epidemiologist in infectious diseases at the University of Edinburgh in UK, said" We have a big problem in terms of the strategy to control of the disease and how to achieve it, and no country has an exit strategy, it is a major scientific and social challenge.

, “Imperial College of London , issued a study saying that it is possible to continue the fight against corona virus for along time after COVID-19

The psychologist Wagner assumes that we will likely maintain behavioral changes for long time for example changing our way of greeting each other and social distances . Professor Wagner says: “No one knows how long this health crisis will continue ”. He notes that, until now, there were only preliminary considerations on the subject. "Whether there are fundamental changes in behavior or not “

According to **Harry** managing director of the Institute Foundation, “said we find ourselves in "total isolation", people become suspected their confidence in others, and states and societies are isolated. The most positive thing is that the world becomes stronger.

after the COVID-19 as people manage to adapt to developments, they adapt and learn to cope better with changes and be more worry to health each others. Everyone can contribute to overcoming the crisis if they take advantage of learning opportunities from the crisis.

What are the opinions of optimists after COVID-19 , they said ((our problems as common, in society more than just a group of individuals competing against each other for wealth and position or (posts) , we can understand that market should not control every thing)) .The environmental situations after Covid-19 drew the world's attention to the rapid change by the interruption of industrial sectors , cares other machinery systems in a number of countries on the environment and reducing air pollution.

It is necessary doing many next strategies to continue preventing air pollution. At the same time, people all over the world are sharing their interesting story about online during isolation about COVID-19 as Laughing jokes for prevention , as if they were shining the future in the ending of health disaster and preparing to other future epidemiological wave if appears.

The expectations of experts in the fields of economics, science, environment, technology, and politics after corona have varied. summarized them in the following points:

1- Fear of the others:

We now know that touching things, being with other people, and breathing air in an enclosed space can be risky, shaking hands or kissing, and we cannot stop washing hands, not touching nose, mouth with dirty hands as a good habit. In the absence of others, it may become our comfort, not their presence, and we will be satisfied with online or mobile communication.

2- New patriotism **وطنية** and new heroes **بطل** :

In many countries, soldiers ,armies and police man are given many advantages because of their role in protecting and defense population from enemy .Doctors , Nurses and Health professionals and other medical staff will be given day and night to fight against COVID-19 and there were number of death among them also they become **patriotism** and **heroes** for "caring for the health and life of society", rather than soldiers and armies in the lands of others.

3- Reduced polarization **قطب**

Having a common enemy (Corona virus) may produce a more unitary and integrated society without focusing to specific polarizations. The enemy is one that does not distinguish one from the other, leading to a growing empathy and power.

4- Return to the experts or media :

In advanced societies of peace and progress economic the voice of an experts or a professional in the medical field was inaudible according to voices of reality television stars, for example, their influence on people is greater than the influence of experienced people, which made societies indifferent to the warnings of these experts, because experts see reality of COVID-19 seriously

5- Less individual

The Corona pandemic marks the end of our romantic relationship with community and excessive individualism.

Countries may return their policy to public beneficial as (health, for example) and other strategies .

6- Electronic medicine

After COVID-2019 , what is happening now can continue to provide health care , medical services via tele medicine , and tele communication through video chats, outside the crowded of public transportation in order to reach a doctor's appointment, or in the waiting rooms, and give priority to clinically patients in critical situations.

7- Increasing interest in family care:

The Corona virus highlights the urgent needs and care for elderly people , and children in different countries, and prepare human resources of professional caregivers who depend on them. Millions of people lost their jobs or their salaries due to the curfew were not only reflected by them, but also by family members who support them, including children, people with special needs, and the elderly, so it is necessary to provide a comprehensive family care for them.

8- A world less free, and open:

The governments will become stronger and nationalism grow, and of all kinds will adopt emergency measures to manage the future crisis. Many of governments not focusing on power and control others.

9- Chinese globalization

The transition from globalization centered on the United States of America to globalization towards China, which started earlier but the pandemic made the direction shorter and faster.

10.fundamental change in the capitalism الراسماليه system the pandemic of COVID-19 will not only have changed long-term economic impacts, but will lead to a fundamental change the company production and decreasing system of global economic so the economic will be more flexible.

11- The United States is losing its leadership role globally

The United States will no longer be viewed as an international leader, because of the narrow self-interest of its government and the promise of its competence to manage matters during the epidemic of COVID-19 as we have seen it is the first one of high mortality and morbidity about COVID-19..

Researchers believe that after Corona the scientist will see enhanced preparedness for hazards, including risks from invisible threats, and increased capabilities to face biological wars. The scientist Tomas said "The age of weapons and heavy equipment will end, and biological, electronic and mental wars are just beginning ... Most countries will adjust their networks to make invisible threats to visible one , every border crossing, whether through airports or ports موانىء , will see increased oversight and voice and video detection systems.

Lifestyle

Researchers believe that the Covid-19 epidemic is change in lifestyles in general. **Brian** says, "After the epidemic ends, there will be a rush in people's visits to their families and restaurants, going to the cinema, and traveling. To what it was before, because they somehow learned to live separate from each other. "

Rene said . "I believe that unify people to face the current crisis will bring them support to each other more, even as international societies, will enhance cooperation , and will strengthen capabilities to find answers to other challenges facing Humanity in future.

In the first week of March 2020 , an analytical study issued by the United Nations Conference on Trade and Development (UNCTAD), found that the shock caused by Corona will lead to collapse global economy in most countries, and will reduce global annual growth .In the worst case scenario, we may see loss of two trillion dollars in global income.

The study called for the creation of coordinated policies among countries of the world to avoid the collapse of the global economy, with a cost expected of about one trillion dollars as a result of the economic slowdown that the Corona virus contributed to its slowing down. In mid-March, the Grand Bank expected that the ways to respond to the Corona crisis would place financial restrictions on economic activity non-expected in the history of post-World War 2.

One of the biggest lessons learned from the Corona crisis will relate to health systems in the countries of the world, with health systems in which countries play a fundamental role in the health sector in terms of application and management to fight COVID-19 while some countries have delivered the health of their citizens to large companies from the private sector, and afraid from systems collapsed, and people were thrown into hospital corridors. It is a return to the economy to serve the many people, the common people, not only the minorities.

The expert of economy PERSON believed that more money should be pumped for health system ,medical technology , medical and health professional staffs who fight corona in the world , medical communication , mobile health services especially for old age with chronic diseases because it is risk for them to go out to medical clinic or hospitals , health infrastructure and others.

The habits should be avoided after and during COVID-19:

Avoid Smoking, water pipe smoking , electronic smoking , cigar, hypnotic drugs ,alcohol , direct contact with people, crowded places, ceremony, sweet drinks salt , sugar and others.

Good habits must be practiced after corona which are (social distance , sport, healthy food and vitamins, drinking a lot of water, hobby practices, use mask and gloves in need and use it in write way , strength immunity , sanitation, washing hands and others.

After corona , we must pay attention to cleanliness of the environment, air, soil, water, waste disposal, and moving forward to discover medicine and vaccines. The world must be fully prepared to face new waves of viruses and epidemics, or as a result of human errors, where other crises can occur and focusing on recovered patients to be benefit from their plasma and reduce curfew step by step so the school, universities ,mosque, Sports matches, and public places activates open in final step according to health authority guidance as conformed by WHO.

After corona , it is necessary for all governments and humanitarian charitable organizations to change their plan to help those who affected and those who lost their jobs bankruptcy افلاس companies and banks to rebuild the global economy as before by the help of International Monetary Fund (صندوق النقد الدولي) . Also, we have to take lessons from the experiences of other countries in order not to fall into a same mistakes, such as increasing mortality and morbidity because of herd immunity as we have been seen in some country all over the world.

After corona restoring of the number of students in schools, institutes, and universities according to global standard to find social distance and decreasing crowded students, in addition to health education for students on epidemic prevention , ventilation , sanitation, their Commitment to healthy habits during sneezing and coughing as conformed by WHO guidelines.

After corona activating the agricultural sector and providing needs to increase production and work to protect the environment from industrial pollution with full attention to the health sector by establishment of hospitals with providing manpower and modern medical devices with the creating of a health insurance program for population and providing basic needs to prevent the epidemic and reduce events and occasions , crowding and focusing on other means of modern communication as possible.

Reducing social gatherings and organizing religious occasions according to preventive health instructions to prevent infectious diseases, and each one must review himself or herself and correct past mistakes if they happen with them. And in order to keep these sad memories between future generations for the purpose of personal and public protection, some of families in the world called their children who born at the time of corona as(**COVID or CORONA**).

Thanks
